Utilization of milk. United States. 1972-74	12

#### MILK PRODUCTION, DISPOSITION AND INCOME, 1974

Higher prices received for milk raised cash receipts from marketings of milk and cream in 1974 to a record high \$9.4 billion, surpassing the previous high of \$8.1 billion in 1973 by 16 percent. Marketings of milk and cream were only slightly above 1973; however, producer returns from combined marketings averaged \$8.39 per hundredweight, up \$1.18 from 1973.

Production of milk during 1974 totaled 115.4 billion pounds, practically the same output as the previous year. Of the milk produced, farmers marketed 112.1 billion pounds (milk equivalent) compared to 112.0 billion pounds in 1973. Marketings include whole milk and farm-separated cream sold to plants and dealers, as well as milk sold directly to consumers.

Plants bought 110.0 billion pounds of milk during 1974, up slightly from 1973, but due to higher milk prices dairymen's cash receipts were up 16 percent from this category. Direct sales to consumers brought \$247 million, up 14 percent from 1973. Returns from cream sales of \$13 million were down 20 percent, continuing a downward trend.

An estimated 3.3 billion pounds of milk were used on farms where produced, 1 percent less than 1973. Approximately 52 percent was consumed in farm households as fluid milk, cream, and farm-churned butter, while the rest was fed to calves.
